

Automate customer engagement opportunities to drive ARR growth

This document is owned by Alex and Leslie and was created on Friday 7th August 2026, for SSC Hackathon Project 5. This document was last updated on 7th August 2026 by Alex.

Create automated opportunities to identify upsell opportunities, increase customer engagement, and demonstrate the ongoing value of SecurityScorecard (SSC).

A customer-facing dashboard would highlight relevant achievements, milestones, and insights, triggering automated personalised emails to showcase SSC's impact, and recommend purchases and additional services.

Examples of events that will trigger automated growth hack messages to customer decision makers and SSC CSMs:

SSC Customer Engagement Triggers — Ranked by Upsell Likelihood

Ranked 1 (highest upsell likelihood) to 23 (lowest), using: Revenue Signal Strength, Urgency/Timing, Buying-Committee Relevance, Value-Demo Strength, Automation Confidence, and Sentiment Risk.

1. Nearing full utilisation of licensed vendor slots (Upsell)

- Hardest possible signal — a literal capacity ceiling
- Reaches procurement/security ops directly and is trivial to detect reliably from platform data
- The "buy more capacity" ask is a natural, low-friction conversation rather than a cold pitch

2. Acquisition announced (Upsell)

- M&A almost always carries dedicated diligence/security budget and urgent timing (new entities must be assessed fast)
- Reaches senior stakeholders, since M&A is exec-sponsored
- One of the strongest "why now, why more" stories available

3. Increasing utilisation of portfolio slots, adding companies (Upsell)

- A softer version of #1 — the customer is actively expanding usage, a leading indicator they'll hit capacity soon
- High confidence, low sentiment risk
- Easy segue into "do you need more headroom"

4. New regulation impacts customer's industry (Upsell)

- Compliance deadlines create real urgency and often unlock dedicated budget lines

- Ranked below #1–3 because "new regulation" detection/relevance mapping is harder to automate with confidence (risk of false positives or irrelevant triggers)
- 5. Customer announces new offices or regional operations (Upsell)**
 - Clear attack-surface growth story tied to a real business event
 - Expansion into new regions doesn't always trigger new security budget in the short term — less immediate than M&A or a hard capacity limit
 - 6. Customer launches a new product or service (Upsell)**
 - Same logic as #5 — attack-surface and third-party risk expansion
 - Product launches are usually less structurally tied to security budget cycles than regional/M&A expansion
 - 7. Supplier breach anticipated (Upsell / Value-demo)**
 - Excellent predictive-intelligence story with a natural "expand supplier monitoring" ask
 - Ranked below the pure capacity/expansion triggers because it's opportunistic — depends on external events
 - Needs careful framing: an upsell pitch riding on someone else's imminent breach carries real sentiment risk if it feels exploitative rather than protective
 - 8. SSC successfully anticipates a breach (Retention / Value-demo)**
 - One of the single best ROI proof-points SSC has
 - Fundamentally a renewal/trust-reinforcement moment, not a natural upsell hook, unless immediately paired with an "expand coverage further" recommendation
 - 9. Customer achieves measurable cost savings (Retention / Upsell enabler)**
 - Very strong for internal business-case building — the customer's champion uses this to justify more spend to their own leadership
 - More of an enablement asset than a spontaneous trigger; it supports other asks rather than standing alone
 - 10. Customer reaches a high level of platform engagement (Upsell)**
 - The trigger text itself flags this as a direct "more likely to buy" signal and routes to CSM + Sales
 - Strong buying-committee relevance and automatable
 - Engagement isn't a concrete unmet need, so it sits behind the harder capacity/event-based triggers
 - 11. Close peer breach anticipated (Engagement / Upsell)**
 - Good peer-benchmarking and threat-relevance story
 - One step more abstract than a breach in the customer's own supply chain (#7) — reaches the same conclusion with less personal stakes for the reader
 - 12. Customer achieves top security score within their industry (Engagement / Upsell)**
 - Great ego/validation moment and a natural segue into "expand your benchmarking/reporting" upsell
 - Mainly reinforces satisfaction rather than surfacing a new need
 - 13. Customer achieves a significant SecurityScorecard score increase (Retention / Engagement)**

- Strong "look what SSC did for you" story and ROI reinforcement, good for renewal conversations
- Doesn't inherently point to a next purchase

14. Reduction in the number of high-risk suppliers (Retention / Engagement)

- Same shape as #13 — clear value proof, supports renewal
- Weaker natural upsell hook on its own

15. Customer's supplier portfolio achieves a significant average score increase (Retention / Engagement)

- Portfolio-level version of #13/#14
- Ranked slightly lower because "top 5% of customers improving monthly" is a narrower, less personally resonant framing

16. Share price up vs peers (Engagement)

- Interesting context signal — financial headroom can mean budget availability
- Very indirect — no direct link to their SSC usage or an unmet security need, and harder to connect credibly without seeming opportunistic

17. New stakeholders identified who should be engaged, the DMU (Engagement)

- Valuable for expanding the relationship and building future pipeline
- A relationship-building trigger, not a needs-signal — the payoff is longer-term

18. Customer compliment in Customer Forum (Engagement / Retention)

- Great advocacy/reference moment and goodwill builder
- Sentiment isn't purchase intent; best used to strengthen the relationship, not drive a hard ask

19. Alumni joins another customer organisation (Engagement)

- Can accelerate a conversation when it happens — familiarity shortcuts trust-building
- Low-frequency, hard to action reliably at scale, and not tied to a specific unmet need

20. A DMU posts about cybersecurity (Engagement)

- Useful social-selling hook reaching a real decision-maker
- Posting isn't an active need or budget event — largely a conversation-starter

21. New customer users log into SSC for the first time (Engagement)

- Good adoption/expansion-of-usage metric
- Reflects internal rollout, not a purchasing signal, and rarely reaches anyone with budget authority

22. A user (non-DMU) posts about cybersecurity (Engagement)

- Same logic as #20 but weaker
- Posting user likely lacks budget authority, so this is more champion-building than pipeline-building

23. Upcoming Customer Success (CSM) meeting identified (Engagement / Logistics)

- Not a needs-signal at all — it's a scheduling/prep trigger
- Useful as a container to surface other triggers ahead of a call, but on its own has no correlation to upsell propensity — closest in nature to a routine, low-intent event

Additional dashboard intelligence and news integration

The dashboard should also surface relevant external intelligence to create timely engagement opportunities.

Examples:

- Pull company news from sources such as Google News.
- Highlight events relevant to the customer or their portfolio, including:
 - Customer acquisitions or mergers.
 - Acquisitions involving monitored suppliers.
 - Security breaches affecting peers or suppliers.
 - New cybersecurity partnerships or initiatives.
 - Industry developments relevant to the customer's risk profile.

These insights can trigger proactive customer communications, create conversation opportunities for account teams, and identify potential upsell opportunities.
